Application No.: 10/561.358 Case No.: 59383US007

## AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions of claims in the application.

- 1. (Currently amended) A heat resistant masking tape, comprising (1) a heat resistant backing film layer, wherein the heat resistant backing film layer is selected from the group consisting of polyethylene naphthalate, polyphenylene sulfide, and polyimide, further wherein a first surface of the heat resistant backing film layer is surface treated, and further wherein a second surface of the heat resistant backing film layer opposite the first surface is treated with a release agent; and (2) a nonaqueous pressure-sensitive adhesive layer disposed on the treated surface of the heat resistant backing film layer, wherein the pressure-sensitive adhesive layer comprises a polymer resulting from solution polymerizing and cross-linking in an organic solvent a monomer mixture comprising an alkyl (meth)acrylate with an alkyl group having 4 to 15 carbon atoms, glycidyl(meth)acrylate and (meth)acrylic acid, the glycidyl(meth)acrylate being present in an amount of 2 to 13% by weight of the total weight of monomers and the (meth)acrylic acid being present in an amount of 1 to 7% by weight of the total weight of monomers.
- (Original) A heat resistant masking tape according to claim 1, wherein said pressure-sensitive adhesive layer has a thickness of 0.5 to 100 μm.

## (Cancelled)

- (Previously presented) A heat resistant masking tape according to claim 1, wherein said heat resistant backing layer has a thickness of 1 to 250 µm.
- 5. (Previously presented) A heat resistant masking tape, comprising (1) a heat resistant backing film layer; (2) a pressure-sensitive adhesive layer disposed on the heat resistant backing film layer, wherein the pressure-sensitive adhesive layer comprises a polymer resulting from polymerizing and cross-linking a monomer mixture in an organic solvent, the monomer

mixture consisting essentially of an alkyl (meth)acrylate with an alkyl group having 4 to 15 carbon atoms, glycidyl(meth)acrylate and (meth)acrylic acid, the glycidyl(meth)acrylate being present in an amount of 2 to 13% by weight of the total weight of monomers and the (meth)acrylic acid being present in an amount of 1 to 7% by weight of the total weight of monomers.
